When adding or subtracting fractions, we need to find a common denominator.

a) 

Multiples of 3 are 3, **6**.

A multiple of 6 is **6**.

The lowest common multiple of 3 and 6 is 6.

will find an equivalent fraction with a denominator of 6.

$$\frac{2}{3} + \frac{1}{6} = \frac{4}{6} + \frac{1}{6} = \frac{5}{6}$$

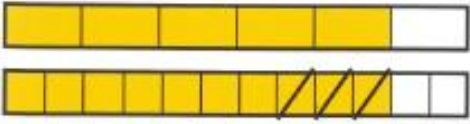

Hattie eats $\frac{5}{6}$ of a bale of hay in a day.

b) Molly eats $\frac{1}{4}$ of a bale less than Hattie.

Use the LCM of 6 and 4 to find a common denominator.

Multiples of 6 are 6, **12**

Multiples of 4 are 4, 8, **12** The LCM is 12.

$$\frac{5}{6} = \frac{10}{12}$$

$$\frac{1}{4} = \frac{3}{12}$$

$\frac{5}{6} - \frac{1}{4} = \frac{10}{12} - \frac{3}{12} = \frac{7}{12}$

Molly eats $\frac{7}{12}$ of a bale of hay in a day.

I need to subtract.
